2007: ISSUENET YEAR IN REVIEW

Releases in 2007 introduced a number of integrations, bringing issue management into existing programs and streamlining the user experience. Coupled with significant enhancements to stability and performance, IssueNet finished 2007 strong! Customers with current support agreements can download the newest releases from the website.

TOP 5 NEW FEATURES FROM 2007

- 1. OUTLOOK INTEGRATION
- 2. VISUAL STUDIO INTEGRATION
- 3. MS PROJECT INTEGRATION
- 4. ONE LICENSE = MANY SOLUTIONS
- 5. INSIGHT DASHBOARDS

BLOGS.ELSITECH.COM INTRODUCED

With the introduction of the new elsitech.com we are excited to announce the addi-

tion of a new resource to help you get the most out of your IssueNet system. This new resource, available under the News section, is blogs. elsitech.com, where we will be sharing information on upcoming product features, best practices, and general .NET software development issues. We hope you will check in from time to time

and put in your own thoughts via the comments. Our goal is to maintain open communication with the community, and this forum is a cornerstone of that effort. You can even add the RSS feed to have new articles delivered directly to you. Current posts include a discussion on the 4.7 release and an ASP.NET related article on dynamic gradients.

ISSUENET 4.7 RELEASE

IssueNet 4.7 is currently in beta and will have a release candidate available on January 28, 2008. The official release will drop on February 5, 2008. The release includes functionality to create and update issues via email sent to a designated address, adding a very lightweight and smartphone-friendly way to interface with the system. Performance enhancements and bug fixes are also part of the release. For additional discussion check out blogs.elsitech.com.

Tip: Workspace via ClickOnce

With the 4.7 release Workspace integrations (Outlook, Visual Studio, and MS Project) can now be deployed via IssueNet Central and ClickOnce technology. No installation is required, which streamlines deployment. This feature is the subject of January's TechTip.
