## What's New In IssueNet 4.6

The IssueNet 4.6 release introduces a variety of new features. For information on defects fixed and other changes implemented in this release, please consult the [Release Notes](#) section of this document.

Feature	Supported Products	Enables You to
IssueNet Project	IssueNet Project	This addition to the IssueNet Platform enables you to add issues and tasks from IssueNet to Microsoft Project and add data from Project plans to IssueNet. Synchronization capability allows changes to estimates and other critical project data to be updated between IssueNet and Project.
\$(Prompt) Queries	IssueNet Manager, IssueNet Workspace	Queries built using the new \$(Prompt) variable will prompt for search input each time the query is run. \$(Prompt) queries are extremely useful for queries in which the search values change frequently.
Spell Check On Update	IssueNet Manager	Users can set a preference to have the current item's text fields spell checked each time the document is updated.
Cross Relationships	IssueNet Platform	When linking issues or tasks IssueNet can be configured to allow bi-directional relationships.
Right-click Save As option for attachments	IssueNet Manager, IssueNet Workspace	Allows attached documents to be saved to disk without launching.

Properties of existing classes can be set as not null	IssueNet Platform	Administrators can set properties for existing classes to not allow nulls. If nulls exist the administrator will be prompted to set values for null properties before proceeding.
Date properties can be set to default values using variables which set values relative to the current date	IssueNet Platform	Using a variable such as \$(30DaysFromToday), an administrator can set a date property to a values relative to the current date.
Queries which use item relationships can be based on properties which belong to sub-classes of the class at which the relationship is defined	IssueNet Manager, IssueNet Workspace	For example, a query for tasks with related defects can query for a property which is defined on the defect class when the tasks to issue relationship is defined on the parent issue class.
Scripts are now added directly to actions as opposed calling functions defined in a solution script	IssueNet Platform	Simplifies the management and use of scripted actions in workflows
On application load trigger event	IssueNet Platform	This trigger allows actions to be executed on logon
For large text fields which use the protected text option, timestamps are appended on update to prevent timestamp editing.	IssueNet Relay	Prevents users from editing timestamps on protected text fields.

## Release Notes:

**Please Note:** The following release notes document known issues unresolved at time of release as well as defects and other software changes of potential interest to users and administrators. These release notes are not comprehensive of every change made to the software for this release. Software changes deemed to be of internal interest only and defects believed to be present only in internal releases have not been included.

Because any issue may have been reported by multiple customers and be referenced by multiple support tickets, issue IDs used in these release notes are the unique ID's used by Elsinore development. If you have a question about a specific issue or whether it resolves a specific support ticket, please contact Elsinore Technical support or refer to issue IDs referenced in your support ticket(s).

## Known Issues at Time of Release

IssueID	Description	Products Affected
DEF-1140	Landscape printing mode is not available.	IssueNet Manager, IssueNet Workspace
DEF-1812	Duplex printing for text report formats is not available.	IssueNet Manager, IssueNet Workspace
DEF-2138	Zoom controls do not function properly for distribution charts.	IssueNet Manager, IssueNet Workspace
DEF-2465	Vertices added to workflow transitions cannot be repositioned on the workflow diagram.	IssueNet Administrator
DEF-2780	Toolbar customization does not persist between sessions.	IssueNet Manager
DEF-2992	Opening workflow and report designers can cause the Administrator to lose focus.	IssueNet Administrator
DEF-3174	In some instances closing a Workspace form will cause the host application to lose focus.	IssueNet Workspace
DEF-3441	In the forms designer integer text boxes cannot be placed on forms.	IssueNet Architect
DEF-3409	It is possible to get an exception message when clicking around in the Explorer. However, the occurrence is very infrequent and the exact steps to reproduce are unknown.	IssueNet Manager, IssueNet Workspace
DEF-3558	In some instances the scroll bar on dashboard pages is not present.	IssueNet Insight
DEF-3666	Form and solution scripts will not run on Vista and some Windows XP systems unless a hot fix is applied. See <a href="#">MSDN article 928208</a> or contact Elsinore technical support for more information.	IssueNet Manager, IssueNet Workspace
DEF-3743	When regional settings which use metric measurements are in use, Page Setup does not maintain margins properly.	IssueNet Manager, IssueNet Workspace
DEF-3847	Cannot open document URI links via Click Once deployment.	IssueNet Manager, IssueNet Workspace
DEF-3923	New queries do not show up in the query filter box of the Issue Explorer unless the Explorer is closed and re-opened.	IssueNet Manager
DEF-3954	An exception message can occur when opening the queries after exiting the IssueNet Manager with the Search group bar open and the Queries group bar closed.	IssueNet Manager
DEF-3974	Updating a workflow which references actions or conditions which have been deleted and purged can corrupt the workflow definition.	IssueNet Administrator

## Issues Resolved by this Release

IssueID	Description	Products Affected
DEF-3944	The IssueNet Assistant would produce an error when creating new database, using Windows Authentication and an Identity tag with no password	IssueNet Assistant

DEF-3915	Clicking on a URI link in an e-mail notification could produce a "Locate link browser" message.	IssueNet Manager
DEF-3907	Deleting a parameter list currently associated with a class property could cause an error when opening the class.	IssueNet Architect
DEF-3905	Executing a query for which there is an already open result set would produce an error instead of refreshing the results.	IssueNet Manager
DEF-3900	To resolve performance problems with documents stores which contain large numbers of documents, the add document dialog was changed to not display existing documents by default.	IssueNet Manager, IssueNet Workspace
DEF-3891	In the Assistant clicking to Edit a license with no license selected would produce an exception.	IssueNet Assistant
DEF-3859	Entering special characters in search tool fields prevented the clear button from clearing the search form.	IssueNet Manager, IssueNet Workspace
DEF-3846	Attached XML files would open in a browser window with no option to save. A Save As option was implemented.	IssueNet Relay
DEF-3828	Specifying the license server address as https:// would cause the Assistant and Administrator to produce an exception.	IssueNet Assistant, IssueNet Administrator
DEF-3824	Entering a non-numerical value in the Task ID field in the task search form and executing a search would cause an exception.	IssueNet Manager, IssueNet Workspace
DEF-3820	Some patterns of use which involved adding, viewing, and deleting tasks in sequence could cause a crash.	IssueNet Manager
DEF-3817	When using the Intercept solution the found in and fixed in version fields were not refreshed when opening a form.	IssueNet Manager, IssueNet Workspace
DEF-3815	When cloning issues the date submitted was not reset to the current date.	IssueNet Manager
DEF-3805	When adding additional text to a time stamp text box, the cursor would jump to the top of the text box if the control contained enough text to enable the scroll bar.	IssueNet Manager, IssueNet Workspace
DEF-3800	IssueNet Central would provide incorrect indication that the 2.0 .NET framework needed to be installed on the client when browsing the site using Firefox.	IssueNet Platform
DEF-3787	Using IE 7 with Windows Vista attached .png files would not display.	IssueNet Relay
DEF-3781	Default focus in issues forms was moved from the subject to the description to prevent inadvertent editing of the subject.	IssueNet Manager, IssueNet Workspace
DEF-3773	Executing a query without saving and then exiting the application without saving the query would delete personal workspace settings.	IssueNet Manager
DEF-3767	When printing from an explorer view the report would only display results from the first page.	IssueNet Manager, IssueNet Workspace
DEF-3764	Notification templates were edited to use <pre> tags instead of <textarea> tags for proper display in Outlook 2007.	IssueNet Platform
DEF-3740	The display of the modified time on an issue was inaccurate by one hour when regional settings were applied to the operating system's date time formats.	IssueNet Manager, IssueNet Workspace

DEF-3688	Horizontal and Vertical Increase, Decrease, Remove and make equal toolbar items in the forms editor were not functional.	IssueNet Architect
DEF-3638	The connection wizard would not refresh web service connections when selecting a different server.	IssueNet Platform
DEF-3583	Security settings on user accounts could cause performance problems when loading the Search pane.	IssueNet Relay
DEF-3531	When refreshing a list changed items would be refreshed without a prompt to update or discard changes.	IssueNet Manager, IssueNet Workspace
DEF-3619	When passing data between two connected dashboard parts, the sort order defined by the provider part was not preserved.	IssueNet Insight
DEF-3515	Clicking between tabs on a form could cause unwanted time stamps to be inserted into large text fields.	IssueNet Relay
DEF-3509	Could not check a Boolean value using a condition.	IssueNet Platform
DEF-3508	Issue Explorer would not rebuild the column list display based on the list view for the class being queried.	IssueNet Manager, IssueNet Workspace
DEF-3494	Service Manager help window would display as modal if launched from the help window.	IssueNet Service Manager
DEF-2612	When scrolling and resizing list views, portions of the results in the list would disappear from view.	IssueNet Manager
